SUMMARY

Backend-leaning software engineer and recent NYU M.S. graduate (Computer Engineering) targeting new-grad SWE and MLE roles. Strength in backend systems and full-stack delivery (Django, React, Python), with an equal track in applied ML/NLP (PyTorch, Hugging Face, RAG). Co-author on a paper accepted at The Web Conference '24.

EDUCATION

New York University, Tandon School of Engineering

New York, NY

M.S. Computer Engineering — cGPA: 3.68

May 2026

- Coursework: Machine Learning, Deep Learning, Big Data, Computing Systems Architecture, ML Systems Engineering & Operations, ML for Cybersecurity.

Lahore University of Management Sciences (LUMS)

Lahore, Pakistan

B.S. Computer Science — Graduated with High Merit

Sep 2020 – Jun 2024

- Coursework: Algorithms, Data Structures, Operating Systems, Databases, Software Engineering, AI, Machine Learning, Computer Vision, HCI.

EXPERIENCE

Instawork

San Francisco, CA

Software Engineer Intern

May 2025 – Aug 2025

- Juicebox internal outreach platform:** Built core features for a new internal tool used daily across marketing, sales, support, and ops to reach gig professionals — adding precise, targeted messaging (from a single professional to an arbitrarily large segment) as a focused alternative to the blunt zip-code blasts on the team's separate existing tooling.
- Delivered 8+ major feature systems within Juicebox (scheduling, bulk CSV upload, dynamic templates), **cutting campaign setup time ~95%** while sustaining ~92% delivery reliability and reaching thousands of users in minutes; drove a ~180% rise in conversation volume and a 50% lift in chat engagement.
- Improved ops-team efficiency ~2x in handling 70+ professional interactions/day through Juicebox; collaborated cross-functionally with product and design, wrote backend and frontend unit tests (~70% coverage), and contributed to Git-based code reviews.

PosterMyWall

Lahore, Pakistan

Software Engineer Intern, Infrastructure

Jun 2024 – Jul 2024

- Implemented dynamic payment-information loading in PHP and JavaScript, reducing initial page load time by an estimated ~80%.
- Built a role-based access-control system to limit admin permissions, reducing misconfigurations by an estimated ~45%.

PROJECTS

Google Fake-News Checking Extension

Python · Flask · Llama 3 · RAG · JS

- Built a Chrome extension using Flask, JavaScript, and Llama 3 that flags misinformation in real time via the Google Fact Check API.

StockStream — Real-Time Stock Insights

Kafka · Spark · InfluxDB · PostgreSQL · Grafana

- Built a real-time analytics pipeline for stock prices, ingesting high-frequency streams via Kafka and Spark into a hybrid InfluxDB/PostgreSQL backend for live and historical views.

Rung — Real-Time Multiplayer Card Game

React · Node.js · Socket.IO · TypeScript

- Built a 4-player game with synchronized game state, live chat, and robust error handling for a smooth real-time experience.

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, TypeScript, C++, C, PHP, SQL

Backend & Web: Django, Flask, Node.js, React, REST APIs, Socket.IO, PostgreSQL, MongoDB, MySQL

ML / AI: PyTorch, TensorFlow, Scikit-Learn, Hugging Face, DistilBERT, LLaMA 3, RAG, NLP, Pandas, NumPy

Data & Infra: Kafka, Spark, Hadoop, InfluxDB, Redis, Grafana, Docker, AWS, GCP, Azure

Tools & Practice: Git, npm, Webpack, Postman, Jupyter, Agile, Figma, Cursor
